

Paper Guarantee

Eliminate risk of non-payment on checks accepted at the point of sale

Paper Guarantee enables you to accept checks at the point of sale. During face to face transactions, verification and authorization are obtained for a swift approval or decline. Manually deposit the paper checks at the bank and receive guaranteed funding. It's a fast and simple solution to increase revenue.

Payment assurance

Check guarantee virtually eliminates the risk of accepting bad checks. Verified checks are guaranteed for reimbursement, thus assuring that each check is paid. This helps to greatly improve cash flow and eliminate collection operations. Enjoy the peace of mind in knowing funds are guaranteed by the processor.

Premium online reporting

Online reporting gives you access to complete transaction history with features including account reconciliation and transaction history. You will also appreciate the free, comprehensive customer service and technical support provided by the check processor.

Equipment flexibility

Service can be programmed into almost any existing credit card terminal. A check reader device may be connected to the terminal, or check information can simply be keyed in manually. Multiple virtual terminals and payment gateways are also supported.

Easy and secure

Paper Guarantee is ideal for businesses that prefer to deposit checks the traditional way with additional protection. By following simple steps during the transaction the terminal will automatically run the check through multiple verification databases and either authorize or decline the transaction based on its findings. Should an authorized check return unpaid, funds are fulfilled by the processor.

Benefits

- Accept paper checks at the point of sale
- Receive funding on returned checks
- Track transaction history with free online reporting
- Supports numerous credit card terminals and check readers
- Easy to implement
